Define the Problem Statements

Date	29 September 2026
Team Members	Mohammedmoinuddin S (Team Lead), Daniel Giftson R, Mizwar Shahul R, Adnan Mustafa A, Akshay Kumar G
Project Name	Import Data using Transform Maps (Spreadsheet)
Maximum Marks	2 Marks

Customer Problem Statement:

A customer problem statement describes the situation from the customer's point of view. For this project the customers are the administrator who must load employee data from a spreadsheet into ServiceNow, and the HR team that needs to see the result.

Project Context:

Bulk employee data arrives in Excel format and must be migrated into ServiceNow efficiently and accurately, using an Import Set as the staging area and a Transform Map to move the data into the target table.

Problem Statements:

Problem Statement (PS)	I am (Customer)	I'm trying to	But	Because	Which makes me feel
PS-1	A ServiceNow administrator handling employee onboarding data	Bulk-load employee records (ID, name, email, department, location) received in an Excel sheet into ServiceNow	Entering records one by one is slow, and uploading the same sheet again creates duplicate employees	There is no automated field mapping or unique-key check between the spreadsheet and the ServiceNow table	Frustrated and worried about the accuracy of the employee data
PS-2	An HR / operations team member	See how many employees belong to each department and location	The data sits in spreadsheets and has to be counted manually	There are no reports or a dashboard built on the imported employee table	Uninformed and slow to make staffing decisions
