

Project Design Phase

Proposed Solution Template

Date	29 September 2026
Team Members	Mohammedmoinuddin S (Team Lead), Daniel Giftson R, Mizwar Shahul R, Adnan Mustafa A, Akshay Kumar G
Project Name	Import Data using Transform Maps (Spreadsheet)
Maximum Marks	2 Marks

Proposed Solution Template:

The project team has filled the following information in the proposed solution template.

S.No.	Parameter	Description
1.	Problem Statement (Problem to be solved)	Employee data received in Excel must be loaded into ServiceNow quickly and accurately. Manual entry is slow and error-prone, and re-importing the same data creates duplicate records.
2.	Idea / Solution description	Load the spreadsheet into a staging Import Set table (Employee Import), use the Sample Spreadsheet Import transform map to move data into the Employee Test table, and enable Coalesce on Employee ID so existing employees are updated and new ones inserted. Add reports and a dashboard for insight.
3.	Novelty / Uniqueness	Combines import, validation, duplicate prevention and analytics in one no-code, platform-native flow. Transform History shows exactly how many rows were inserted, updated or ignored on every run.
4.	Social Impact / Customer Satisfaction	Reduces repetitive data entry and errors, saves administrator and HR time, and keeps employee records clean and trustworthy.
5.	Business Model (Revenue Model)	Internal enterprise efficiency solution built on an existing ServiceNow licence; value comes from time saved and data quality. It can be packaged as a reusable data-onboarding accelerator or service offering.
6.	Scalability of the Solution	The same table and transform map handle any number of uploads. Additional fields, target tables, scheduled data sources and reports can be added without redesign.
